SUMMARY

Computer Science graduate with experience building full-stack web and mobile applications using React, Flutter, Python, and PostgreSQL. Strong foundation in software engineering, data structures, algorithms, and AI application development.

EDUCATION

Kennesaw State University 2021 - 2026
Bachelor of Science in Computer Science - Dean's List GPA: 4.0
Relevant Coursework: Software Testing QA, Intro to Software Engineering, Software Architecture and Design, Data Structures, Programming Problem Solving I & II.

EXPERIENCE

Sports Media Inc. Summer 2025
Software Engineer Intern

- Engineered responsive UI components in React, improving usability and application performance.
- Integrated RESTful backend services using Supabase (PostgreSQL), implementing authentication and real-time data sync.
- Contributed to Agile sprints and performed peer code reviews using Git/GitHub.

Kennesaw State University Fall 2025
Tutor & Lab Assistant (Java & Python)

- Mentored 50+ students in Java and Python, reinforcing OOP, algorithms, and debugging strategies.
- Evaluated 100+ programming assignments, improving student code quality through structured technical feedback.
- Provided one-on-one debugging sessions to resolve issues related to data structures and algorithm efficiency.

PROJECTS

Shared Grocery List App Project
Flutter, Supabase, PostgreSQL, Figma, Github

- Built a full-stack Flutter application with role-based authentication, multi-user collaboration, and real-time synchronization.
- Designed a relational PostgreSQL schema and integrated third-party nutrition APIs to enrich shared list functionality.
- Produced comprehensive documentation covering requirements, system design decisions, and testing procedures.

RAG-Based Document Q&A System Project
Python, FastAPI, Ollama, Qdrant, Docker, React

- Built a full-stack RAG application using FastAPI/React for document uploads and context-aware answers using local Llama models.
- Containerized the application with Docker and engineered a document ingestion pipeline to chunk documents, generate vector embeddings, and store metadata in Qdrant for semantic similarity search and relevant context retrieval.
- Implemented conversational chat with document-specific querying, chat history, and context retrieval for grounded responses.

Decaf 20 Compiler Project
Python, Lexical Analysis, Parsing, AST

- Built a lexical analyzer for Decaf20 supporting keywords, literals, operators, comments, error reporting with line/column tracking.
- Implemented a recursive-descent parser for the Decaf grammar, generating a structured Abstract Syntax Tree (AST) for functions, control flow, and expressions with operator precedence.
- Designed AST traversal and formatted tree output to represent program structure across declarations, statements, and expressions.

Movie Data Mining & Analysis Project Project
Python, Pandas, Data Mining, Visualization, Statistical Analysis

- Performed exploratory analysis on the 32M MovieLens dataset using Pandas to identify patterns in movies and user behavior.
- Applied data preprocessing, PCA, K-means clustering, decision trees, and temporal analysis for pattern discovery and validation.
- Created visualizations and authored a technical report summarizing methodology, comparative analysis, and data-driven insights.

Retro RSVP Website ("Invitide") Colorstack Hackathon
Next.js, Supabase, Figma

- Developed a responsive full-stack RSVP platform using Next.js with server-side rendering and PostgreSQL database design.
- Implemented QR code-based check-in to streamline event entry and reduce manual processing time.
- Delivered a production-ready prototype within a 24-hour hackathon sprint.

SKILLS

Languages	Java, Python, HTML, CSS, Javascript, Dart, R, Kotlin, MySQL, PostgreSQL
Frameworks	Flutter, React, Next.js
Tools	Git/GitHub, Supabase, Firebase, Figma, Android Studio, IntelliJ, VS Code, Google Suite
Concepts	Object-Oriented Programming (OOP), Data Structures, Algorithms, MVVM
